SUBJECT INDEX

VOLUME 41

Abelson murine leukemia virus
  recovery of transmissible virus by recombination with helper virus, 271
  transfection of fibroblasts by cloned DNA, 271
Acute leukemia virus MC29
  deletions within transformation-specific RNA sequences give rise to partially transformation-defective mutants, 754
Adeno-associated virus
  adenovirus early region 1 gene deletions, 868
  replication, 868
Adeno-associated virus 2
  mapping of 5′ termini of two RNAs in left half of genome, 518
Adenovirus
  covalent complexes between nucleotide and 80-kilodalton terminal protein, 265
  early region 1b, 423
  early region 1 genes, effect of deletions upon replication of adeno-associated virus, 868
  human cells transformed with herpes simplex virus type 1 thymidine kinase gene and adenovirus type 2 DNA, 423
  initiation of DNA replication, 265
Adenovirus 2
  early region 4 polypeptides, identification by in vitro translation and tryptic peptide map analysis, 334
Adenovirus type 2
  DNA-transformed human cells, 423
  temperature-sensitive mutations, physical mapping by restriction endonuclease analysis of interserotypic recombinants, 401
  transformed hamster cells, 1076
  viral gene products, 1076
Adenovirus type 5
  host range mutant-transformed cells, 674
  viral DNA, integration and expression, 674
AKR lymphoma cells
  cultured, 626
  gag$^-$ *pol*$^-$ *env*$^+$ murine leukemia virus, molecular properties, 626
AKR-247 MCF virus
  gp70-p15(E) complex, 1112
  MCF-specific murine monoclonal antibodies, 1112
AKR mice
  retroviral RNA structure, 18
  spontaneous lymphoma-derived cell lines, 18
AKR thymic epithelial reticulum cell lines
  endogenous murine leukemia virus characterization, 360
  mechanism of leukemogenesis, 360
Aphthovirus
  unsegmented RNA genome, biochemical evidence of recombination, 66
9-β-D-Arabinofuranosyladenine
  mutations in herpes simplex virus DNA polymerase gene and resistance, 909
Autographa californica nuclear polyhedrosis virus
  orientation of the genome, a proposal, 1118
  restriction endonuclease fragments of DNA, molecular cloning and physical mapping, 940
Avian acute leukemia virus MC29
  normal chicken DNA locus and transforming gene, structural relationship, 635
Avian myeloblastosis virus
  transforming gene related to unique chicken DNA regions separated by at least one intervening sequence, 250
Avian myelocytomatosis virus strain MC29
  myc domain of the 110,000-dalton *gag-myc* polyprotein, 745
  partially transformation-defective mutants, isolation and biochemical characterization, 745
Avian retrovirus
  U3 region of long terminal repeat, spontaneous variation and synthesis, 163
Avian sarcoma virus
  DNA-processing activities, 974
  RNA-dependent DNA polymerase, purified α, β_2, and αβ molecular forms, 974
Avian sarcoma virus PRC II
  genome expression, 767
Avian sarcoma virus UR2
  genetic structure and transforming sequence, 833

Baboon endogenous virus
  DNA sequence relationship of genome to genomes of other type C and D retroviruses, 801
Baboons
  endogenous type C viral DNA sequences, organization, 583
Bacillus subtilis
  bacteriophage ϕ29 morphogenesis, 508
  DNA-gp3 intermediate in in vivo and in vitro assembly, 508
Bacteriophage ϕ29
  Bacillus subtilis, 508
  DNA-gp3 intermediate in in vivo and in vitro assembly, 508
  morphogenesis, 508
Bacteriophage MB78
  Salmonella typhimurium, 1038
  virulent, 1038
Bacteriophage SP01
  gene 27 required for viral late transcription, 715
Bacteriophage T4
  plasmid pR386 and *Escherichia coli* cells, 330
  transducing bacteriophages, genetic analysis, 345
  unf mutants, 330
Bacteriophage T5$^+$
  binding sites for reversible adsorption via the L-shaped tail fibers, 222
  polymannose O-antigens of *Escherichia coli*, 222
Bacteriophage T7
  reproduction, involvement of the bacterial *groM* gene product, 657

Bacteriophage T4-infected *Escherichia coli*
pyrimidine dimer-DNA glycosylase activity in vivo, 88
BK virus DNA
hamster kidney cell transformation, 319
Bunyavirus
genome RNA species, nucleotide sequence analyses and predicted coding, 119
virus-coded nonstructural polypeptides in infected cells, 643
Burkitt lymphoma-derived cells
characterization of major Epstein-Barr virus-specific RNA, 376

Canavanine
arginine analog, 1109
Epstein-Barr virus-induced proteins, synthesis in superinfected Raji cells, 1109
Capsid protein precursors
cleavage site, 340
poliovirus, 340
cDNAs
derived from RNA of Sindbis virions and of defective interfering particles, 153
sequence analysis, 153
Chicken cells
Rous sarcoma virus adsorption, 958
Colobus type C virus
endogenous viral genome characterization, 842
molecular cloning of unintegrated viral DNA, 842
Cowpea mosaic virus
genome-linked protein VPg, antibodies against, 1083
in vitro generation of a precursor to both capsid proteins by a bottom-component RNA-encoded protease from infected cells, 8
middle-component RNA expression, 8
precursor polypeptide, 60,000-dalton, 1083
Cytomegalovirus
human, 309
nucleoprotein complexes, analysis, 309
Cytoplasmic polyhedrosis virus
double-stranded RNA genome segments, independently transcribed, 326

Defective interfering genomes
vesicular stomatitis virus, 566
Defective interfering particle
vesicular stomatitis virus primary transcription, in vitro and in vivo inhibition, 172
Defective interfering particles
guanidine-resistant, 615
poliovirus, 615
sequence analysis of cDNAs derived from RNA, 153
vesicular stomatitis virus, interference among, 210
Deletion mutant
Moloney murine sarcoma virus, 735
transformation-defective, 735
DNA-gp3 intermediate in in vivo and in vitro assembly
Bacillus subtilis bacteriophage ϕ29 morphogenesis, 508
DNA methylation and amplification
GR/A mice, normal, premalignant, and malignant cells, 1007
mouse mammary tumor virus, 1007

DNA polymerase
Parvovirus H-1 DNA replication in vitro, 982
DNA polymerase gene
herpes simplex virus mutations, 909
resistance to 9-β-D-arabinofuranosyladenine, 909
DNA-processing activities
avian sarcoma virus RNA-dependent DNA polymerase, purified α, β_2, and $\alpha\beta$ molecular forms, 974
DNA replication
adenovirus, 265
initiation, 265
DNA replication in vitro
DNA polymerase requirements, 982
parvovirus H-1, 982
DNA sequence
parvovirus replicative form DNA, 5′ terminus containing the replication origin, 990
DNA sequence relationship
baboon endogenous virus genome and genomes of other type C and D retroviruses, 801
DNA sequences
polyoma, stability during tumor formation, 1000
DNA synthesis
Epstein-Barr virus-infected human epithelial cell line, 703
Double-stranded RNA genome segments
cytoplasmic polyhedrosis virus, 326

Early region 1b
adenovirus, 423
Early region 1 genes
adenovirus, 868
deletions and replication of adeno-associated virus, 868
Early region 4 polypeptides
adenovirus 2, 334
identification by in vitro translation and tryptic peptide map analysis, 334
Empty capsid morphogenesis
conformational differences between self- and extract-assembled empty capsids, 792
poliovirus, 792
Encephalomyocarditis virus
polyprotein termination site on viral RNA, 726
Envelope glycoproteins
maturation on cellular membranes, 947
Newcastle disease virus, 947
Envelope-specific probe
cloning and characterization, 228
xenotropic murine leukemia proviral DNA, 228
env gene product
mouse mammary tumor virus, 414
processing and amino acid sequence analysis, 414
Epstein-Barr virus
binding to receptor-positive cells mediated by two large virion envelope glycoproteins, 286
Burkitt lymphoma-derived cells, 376
canavanine, 1109
DNA synthesis, 703
fluoresceinated, 649
human epithelial cell line after infection, 703
interactions with lymphoid cells, 649
major RNA characterization, 376
monoclonal antibodies against membrane antigen, production and characterization, 258

nuclear antigen induction, 703
protein synthesis in superinfected Raji cells, 1109
Epstein-Barr virus–herpesvirus papio group
herpesvirus pan DNA, 931
Escherichia coli
bacteriophage T4-infected, 88
plasmid pR386, restrictive to growth of bacteriophage T4 *unf* mutants, 330
polymannose O-antigens, 222
pyrimidine dimer-DNA glycosylase activity in vivo, 88
Eucaryotic initiation factor 2
mengovirus genomic RNA, 30

Fc-binding glycoprotein (gE)
herpes simplex virus types 1 and 2, similarities and differences, 137
tentative mapping of viral gene, 137
Fc-binding receptors
herpes simplex virus type 1 glycoprotein gE, 129
Feline sarcoma virus
McDonough, 489
molecularly cloned provirus and its feline oncogene (v-*fms*), characterization, 489
Fv-1 phenotype
modified, 145
N-type and dually permissive cells segregated from mouse fibroblasts, 145

Gene 27
SP01, 715
viral late transcription, 715
Genome expression
avian sarcoma virus PRC II, 767
Genome RNA species
bunyavirus, 119
nucleotide sequence analyses and predicted coding, 119
Glycoprotein gD
herpes simplex virus types 1 and 2, 1099
purification by use of monoclonal antibody, 1099
Glycoprotein gE
anti-gE, effects on virion infectivity and virus-induced Fc-binding receptors, 129
herpes simplex virus type 1, 129
Glycoprotein gD, native
herpes simplex virus type 1, 478
monoclonal antibodies, effect on limited proteolysis, 478
Glycosylation inhibitors
effect on release of enveloped vaccinia virus, 367
gp70-p15(E) complex
MCF-specific murine monoclonal antibodies made against AKR-247 MCF virus, 1112
unique determinant, 1112
GR/A mice
mouse mammary tumor virus DNA, methylation and amplification, 1007
normal, premalignant, and malignant cells, 1007
groM gene product
bacteriophage T7 reproduction, 657
Guanidine
poliovirus polymerase inhibition in vitro, 313

Hamster cells
adenovirus type 2-transformed, 1076
viral gene products, 1076
Hamster embryo cells
herpes simplex virus type 2-transformed and -infected, 1095
polypeptide characterization, 1095
Hamster kidney cells
transformation by fragments of BK virus DNA, 319
Hepatitis B virus
sequence compared with nucleotide sequence of cloned woodchuck hepatitis virus genome, 51
Herpes simplex virus
limited transcription of the genome when latent in human sensory ganglia, 686
mutations in the DNA polymerase gene and resistance to 9-β-D-arabinofuranosyladenine, 909
Herpes simplex virus type 1
anti-gE, effects on virion infectivity and virus-induced Fc-binding receptors, 129
glycoprotein gE, 129
native glycoprotein gD, effect of monoclonal antibodies on limited proteolysis, 478
thymidine kinase gene-transformed human cells, 423
Herpes simplex virus type 2
hamster embryo cells, 1095
multimeric forms of glycoproteins, 348
polypeptide characterization, 1095
Herpes simplex virus types 1 and 2
Fc-binding glycoprotein (gE), similarities and differences, 137
glycoprotein gD purification by use of monoclonal antibody, 1099
Herpesvirus pan
DNA, 931
Epstein-Barr virus–herpesvirus papio group, third member, 931
Herpesvirus sylvilagus
polypeptides of virions and nucleocapsids, 1063
Host range mutants
adenovirus type 5, 674
Human cells
adenovirus early region 1b, 423
transformed with herpes simplex virus type 1 thymidine kinase gene and adenovirus type 2 DNA, 423
Human cytomegalovirus
mapping viral RNAs synthesized at immediate early, early, and late times after infection, 462
nucleoprotein complexes, analysis, 309
temporal patterns of transcription, 462
Human epithelial cell line
Epstein-Barr virus, induction of nuclear antigen and DNA synthesis after infection, 703
Human influenza virus A/WSN/33
neuraminidase gene, complete nucleotide sequence, 730
Human interferon-alpha
altered pharmacological properties, 575
liposome-associated, 575
Human sensory ganglia
herpes simplex virus genome, limited transcription, 686
Hydroxymethyltrimethylpsoralen
photoaddition, 78
simian virus 40 chromatin, mapping in vivo arrangement of nucleosomes, 78

Influenza A viruses
temperature-sensitive, occurrence in nature, 353
Influenza virus
mRNA 5′-cap binding detected by simple, rapid assay, 1105
purified, 1105
Initiation factor 2 activity
decreased protein synthesis, 781
protein synthesis regulation, 781
vesicular stomatitis virus-infected mouse L-929 cells, 781
Intramolecular self-cleavage
picornaviral replicase precursors, 244

Laser flow cytometry
Rous sarcoma virus adsorption to chicken cells, 958
Leader sequence
Rous sarcoma virus subgenomic mRNAs, 527
Leukemogenesis
endogenous murine leukemia viruses isolated from AKR thymic epithelial reticulum cell lines, 360
in vitro studies of mechanism, 360
Long terminal repeat
avian retrovirus, 163
murine retroviral DNAs, 542
sequence analysis, host-proviral junctions, and preintegration site, 542
U3 region, spontaneous variation and synthesis, 163

MB78
Salmonella typhimurium, 1038
virulent bacteriophage, 1038
McDonough feline sarcoma virus
molecularly cloned provirus and its feline oncogene (v-*fms*), characterization, 489
MCF-specific murine monoclonal antibodies
AKR-247 MCF virus, 1112
gp70-p15(E) complex, unique determinant, 1112
Medium T antigen
mutation causing premature termination blocks cell transformation, 1014
polyoma virus, 1014
Membrane antigen
Epstein-Barr virus, 258
monoclonal antibodies, production and characterization, 258
Mengovirus
genomic RNA, 30
recognition of common features by ribosomes and eucaryotic initiation factor 2, 30
Middle-component RNA
cowpea mosaic virus, 8
Mink cell focus-forming virus
cloned proviruses, characterization, 435
endogenous ecotropic murine leukemia viral genomes, 901
infected cellular DNA, 435
recombinant provirus integration in germ line, 901
Minute virus of mice
minichromosome structure of intracellular DNA, 1044
Molecular cloning
characterization of endogenous viral genomes of colobus, 842
restriction endonuclease fragments of *Autographa californica* nuclear polyhedrosis virus DNA, 940
unintegrated viral DNA of colobus type C virus, 842
Moloney murine sarcoma virus
transformation-defective deletion mutant, 735
Monoclonal antibodies
directed against virus-coded proteins of simian virus 40 and polyoma virus, 709
effect on limited proteolysis of native glycoprotein gD of herpes simplex virus type 1, 478
uniform nomenclature, 709
Monoclonal antibody
glycoprotein gD purification, 1099
herpes simplex virus types 1 and 2, 1099
Monosaccharide sequence
Uukuniemi virus protein-bound glycans, 390
Mouse chromosomal DNA
endogenous ecotropic murine leukemia viral genomes, mobility, 901
Mouse fibroblasts
Fv-1 phenotype modification, 145
N-type and dually permissive cells, 145
Mouse hepatitis virus
common 5′-end nucleotides, 557
mRNA characterization, 557
Mouse L cells
induction of new ribonucleotide reductase, 893
pseudorabies virus-infected, 893
Mouse L-929 cells
protein synthesis, regulation by decreased protein synthesis initiation factor 2 activity, 781
vesicular stomatitis virus-infected, 781
Mouse mammary tumor virus
DNA methylation and amplification, 1007
env gene product, processing and amino acid sequence analysis, 414
GR/A mice, normal, premalignant, and malignant cells, 1007
mRNA 5′-cap binding activity
detected by simple, rapid assay, 1105
influenza virus, purified, 1105
mRNA characterization
common 5′-end nucleotides, 557
mouse hepatitis virus, 557
Murine leukemia proviral DNA
xenotropic, cloning and characterization of an envelope-specific probe, 228
Murine leukemia viral genomes
endogenous ecotropic, 901
integration of a mink cell focus-forming virus-type recombinant provirus in the germ line, 901
mobility within mouse chromosomal DNA, 901
Murine leukemia virus
cultured AKR lymphoma cells, 626
gag$^-$ *pol*$^-$ *env*$^+$, molecular properties, 626
Murine leukemia viruses
AKR thymic epithelial reticulum cell lines, 360
endogenous, 360
mechanism of leukemogenesis, 360
Murine mammary tumor virus
exogenous RIII proviral DNA, restriction endonuclease mapping, 855
Murine retroviral DNAs
long terminal repeat, 542
sequence analysis, host-proviral junctions, and preintegration site, 542
Mycoplasma virus L3

tailed, adsorption to cell membranes, 501

Negative-strand RNA
synthesis in vitro, 821
vesicular stomatitis virus, 821
Neuraminidase gene
complete nucleotide sequence, 730
human influenza virus A/WSN/33, 730
Newcastle disease virus
envelope glycoprotein maturation on cellular membranes, 947
RNA-negative temperature-sensitive mutants, complementation between and replication of, 965
N-type and dually permissive cells
Fv-1 phenotype modification, 145
mouse fibroblasts, 145
Nuclear antigen induction
Epstein-Barr virus-infected human epithelial cell line, 703
Nuclear polyhedrosis virus
Autographa californica, 940, 1118
restriction endonuclease fragments of DNA, molecular cloning and physical mapping, 940
Nucleoprotein complexes
human cytomegalovirus, 309
Nucleotide sequence
comparison with hepatitis B virus sequence, 51
Rous sarcoma virus, 5′ noncoding region and part of the *gag* gene, 535
woodchuck hepatitis virus, cloned genome, 51

Parvovirus
minichromosome structure of intracellular DNA, 1044
minute virus of mice, 1044
replicative form DNA, DNA sequence of the 5′ terminus containing the replication origin, 990
Parvovirus H-1
DNA replication in vitro, DNA polymerase requirements, 982
Physical mapping
restriction endonuclease fragments of *Autographa californica* nuclear polyhedrosis virus DNA, 940
Picornaviral replicase precursors
intramolecular self-cleavage, evidence for, 244
Plasmid pR386
rendering of *Escherichia coli* cells restrictive to the growth of bacteriophage T4 *unf* mutants, 330
Poliovirus
cleavage site within capsid protein precursors, 340
conformational differences between self- and extract-assembled empty capsids, 792
empty capsid morphogenesis, 792
guanidine-resistant defective interfering particles, 615
inhibition of polymerase by guanidine in vitro, 313
Poliovirus type 1
temperature-sensitive mutants, isolation and preliminary characterization, 1089
Polymannose O-antigens
binding sites for reversible adsorption of bacteriophage $T5^+$ via the L-shaped tail fibers, 222
Escherichia coli, 222

Polymerase
inhibition by guanidine in vitro, 313
poliovirus, 313
Polyoma virus
DNA sequences and virus-coded proteins, stability during tumor formation, 1000
integration site of DNA in inducible LPT line of polyoma-transformed rat cells, 192
medium T antigen, mutation causing premature termination blocks cell transformation, 1014
monoclonal antibodies directed against virus-coded proteins, uniform nomenclature, 709
Polypeptide characterization
herpes simplex virus type 2-transformed and -infected hamster embryo cells, 1095
Polypeptides
Herpesvirus sylvilagus, 1063
virions and nucleocapsids, 1063
Polyprotein termination site
encephalomyocarditis viral RNA, 726
$pp60^{src}$
autophosphorylation, 1
Rous sarcoma virus *src* gene product, 1
Precursor polypeptide, 60,000-dalton
cowpea mosaic virus, 1083
protein VPg, antibodies against, 1083
Primary transcription
vesicular stomatitis virus, 172
Primate origin
simian sarcoma virus cell-derived sequences, 721
Primate type C simian sarcoma-associated virus and gibbon ape leukemia virus group
proviral DNA, comparative restriction endonuclease maps, 298
Protein synthesis
decreased protein synthesis initiation factor 2 activity, 781
vesicular stomatitis virus-infected mouse L-929 cells, 781
Protein VPg
antibodies recognize a 60,000-dalton precursor polypeptide, 1083
cowpea mosaic virus, 1083
Proviral DNA
primate type C simian sarcoma-associated virus and gibbon ape leukemia virus group, 298
restriction endonuclease maps, 298
Proviruses
cloned from mink cell focus-forming virus-infected cellular DNA, 435
Pseudorabies virus
induction of new ribonucleotide reductase, 893
mouse L cells, 893
Pyrimidine dimer-DNA glycosylase activity
bacteriophage T4-infected *Escherichia coli* as a model system, 88
demonstration in vivo, 88

Raji cells
canavanine, 1109
Epstein-Barr virus-induced protein synthesis, 1109
Rat cell line
dense focus formation, 1073
simian virus 40 small t protein, 1073
Rat cells
LPT line, 192

polyoma-transformed, 192
polyoma virus DNA integration site, 192
Recombination
subgenomic retroviral mRNAs, 919
Reovirus transcriptase
activation and characterization, 110
genetic analysis, 110
Replicating DNA
distribution in intact cells, 877
maturation in isolated nuclei, 877
simian virus 40, 877
Replicative form DNA
DNA sequence of the 5′ terminus containing the replication origin, 990
parvovirus, 990
Restriction endonuclease mapping
exogenous RIII murine mammary tumor virus proviral DNA, 855
Retroviral RNAs
cell lines derived from spontaneous lymphomas of AKR mice, 18
structure, 18
Retroviruses
amphotropic and ecotropic wild mouse, characterization of genome structure, 605
Retroviruses, types C and D
DNA sequence relationship of genomes to baboon endogenous virus genome, 801
Ribonucleotide reductase, new
induction after infection of mouse L cells with pseudorabies virus, 893
Ribosomes
mengovirus genomic RNA, 30
RNA characterization
Burkitt lymphoma-derived cells, 376
major Epstein-Barr virus-specific, 376
RNA-dependent DNA polymerase
avian sarcoma virus, 974
DNA-processing activities, 974
purified α, β_2, and αβ molecular forms, 974
RNA synthesis in vitro
dependence on viral protein synthesis, 821
vesicular stomatitis virus negative-strand, 821
Rotavirus
RNAs, comparison of human and animal, 710
Rous sarcoma virus
adsorption to genetically susceptible and resistant chicken cells studied by laser flow cytometry, 958
leader sequence of mRNAs is approximately 390 nucleotides, 527
nucleotide sequence of the 5′ noncoding region and part of the *gag* gene, 535
$pp60^{src}$, autophosphorylation, 1
transforming protein, phosphorylation and metabolism, 813

Salmonella typhimurium
virulent bacteriophage MB78, 1038
SA11 simian rotavirus
gene protein products of genome, 42
Shope fibroma virus
cytocidal and noncytocidal strain, biological and molecular properties, 97
virion-associated nucleases, 104
Simian sarcoma-associated virus
deletions of specific regions of the genome in defective viruses and in simian sarcoma virus, 593
Simian sarcoma virus
primate origin of cell-derived sequences, 721
Simian virus 40
early transcription, initiation and regulation in vitro, 449
mapping in vivo arrangement of nucleosomes on chromatin, 78
monoclonal antibodies directed against virus-coded proteins, uniform nomenclature, 709
mutant with transposed T-antigen and VP1 genes, 1025
photoaddition of radioactive hydroxymethyltrimethylpsoralen, 78
replicating DNA, distribution in intact cells and maturation in isolated nuclei, 877
small t protein and dense focus formation in a rat cell line, 1073
Simian virus 40 DNA
prereplicative events in permissive cells, 237
Sindbis virions
sequence analysis of cDNAs derived from RNA, 153
Sindbis virus
maturation, inhibition after treatment of infected cells with trypsin, 692
Skeletons
vesicular stomatitis virus, in vitro reassembly, 1055
Small t protein
dense focus formation in a rat cell line, 1073
simian virus 40, 1073
SP01 gene 27
viral late transcription, 715
Spleen necrosis virus
establishment of infection, 183
role of secondary infections, 183
stationary cells, 183
Subgenomic mRNAs
Rous sarcoma virus leader sequence is approximately 390 nucleotides, 527
Subgenomic retroviral mRNAs
participation in recombination, 919

Temperature-sensitive mutants
complementation between and replication of, 965
Newcastle disease virus RNA-negative, 965
poliovirus type 1, isolation and preliminary characterization, 1089
UV irradiation analysis, 965
Temperature-sensitive mutations
adenovirus type 2, 401
physical mapping by restriction endonuclease analysis of interserotypic recombinants, 401
Transcriptase
activation and characterization, 110
genetic analysis, 110
reovirus, 110
Transcription
human cytomegalovirus, 462
temporal patterns, 462
Transcription, early
simian virus 40, initiation and regulation in vitro, 449
Transformation-defective mutants, partially
avian myelocytomatosis virus strain MC29, 745, 754

deletions within transformation-specific RNA sequences, 754
myc domain of the 110,000-dalton *gag-myc* polyprotein, 745
Transforming gene
avian myeloblastosis virus, 250
related to unique chicken DNA regions separated by at least one intervening sequence, 250
Transforming protein
phosphorylation and metabolism, 813
Rous sarcoma virus, 813
Translation in vitro
adenovirus 2 early region 4 polypeptides, 334
Trypsin
Sindbis virus maturation, inhibition, 692
Tryptic peptide map analysis
adenovirus 2 early region 4 polypeptides, 334
Type C viral DNA sequences
analysis with cloned viral DNA, 583
endogenous to baboons, organization, 583

U3 region of long terminal repeat
avian retrovirus, 163
spontaneous variation and synthesis, 163
Uukuniemi virus
monosaccharide sequence of protein-bound glycans, 390
UV irradiation analysis
Newcastle disease virus RNA-negative temperature-sensitive mutants, 965

Vaccinia virus
enveloped, 367
glycosylation inhibitors, effect on release, 367
Vesicular stomatitis virus
defective interfering genomes with different amounts of 5′-terminal complementarity, isolation, 566
defective interfering particles, interference among, 210
infected mouse L-929 cells, 781
negative-strand RNA, synthesis in vitro, 821
primary transcription, in vitro and in vivo inhibition by defective interfering particle, 172
protein synthesis, regulation by decreased protein synthesis initiation factor 2 activity, 781
skeleton reassembly in vitro, 1055
viral protein synthesis, 821
Viral DNA
integration and expression in cells transformed by adenovirus type 5 host range mutants, 674
Viral gene products
adenovirus type 2-transformed hamster cells, 1080
Viral late transcription
SP01 gene 27, 715
Viral RNA
encephalomyocarditis, 726
polyprotein termination site, 726
Viral RNAs
human cytomegalovirus transcription, temporal patterns, 462
mapping, 462
Virion-associated nucleases
Shope fibroma virus, 104
Virus-coded proteins
polyoma, 1000

Wild mouse retroviruses
amphotropic and ecotropic, characterization of genome structure, 605
Woodchuck hepatitis virus
cloned genome, 51
nucleotide sequence compared with hepatitis B virus sequence, 51

INDEX TO DATE OF ISSUE

Month	Date of Issue	Pages
January	21 December 1981	1–351
February	18 January 1982	353–744
March	18 March 1982	745–1122
